

Supplementary Figure 1. Flow diagram of the literature search and study selection process.

A total of 637 articles met the inclusion criteria and were retained for keyword-based analyses. Four articles lacked usable English abstracts; standardized author keywords were retained for the combined LDA corpus. After preprocessing and document-frequency filtering, one keyword-only record contained no retained terms, yielding an effective full LDA corpus of 636 documents. An abstract-only sensitivity corpus included 633 documents.

KCI = Korean Citation Index; LDA = latent Dirichlet allocation.
